ACADEMIC PROJECT

WORKSHOP 1: YT Car Rental System

This system developed and designed a car rental system for car renting and also accessing all the available cars' information. This system also made recommendations based on the customers' car preferences. Developed using PHP language and HTML code in PhpMyAdmin.

WORKSHOP 2: TUAH Car Rental System

This system is an upgrade from the Workshop 1 in aspects of its interface, functionalities, scope and objectives. This system's front end was developed with Notepad++ while the back end used MySQL and PostgreSQL databases. This system is for the customer to make reservation or booking of their preferred vehicle. In addition, throughout the system it will consistently deliver a friendly service and great value to the customers.

FINAL YEAR PROJECT: YT FARM & LIVESTOCK MANAGEMENT SYSTEM

This system is mainly for the admin who will manage the farming and livestock records. It acts as an inventory of the farm including the plot management, feed of the animals, livestock and all the other activities regarding the farm.
